Potentiometric Displacement Sensor
Miniature design
Model 8709

**Application**

Potentiometric displacement sensors are used for direct, precise measurement of mechanical displacements. The mechanical parts of the measuring equipment must be set-up in such a way that the sliding shaft can move without play or lateral forces.

A special multi-finger slider ensures good contact even when the adjustment speed is high or in the presence of vibration. With its housing diameter of only 12.7 mm, the model 8709 is also suitable for highly compact structures.

The movable fastening clamps allow the user variable options for attaching the sensor without complication. Optionally available adaptations, such as flange and ball joint versions, extend and complement the range of possible applications.

Typical fields of application include:

- Measuring the stroke on riveting machines
- Measuring insertion distances
- Offset measurements on bearings
- Spring travel measurements on axes
- Measurements of the movement of hoisting platforms
- Length measurements on pipe bending machines

**Description**

Due to the technology employed in potentiometric displacement sensors, they always operate with a sliding contact system. Special processes are applied to give the resistance tracks low friction, low tendency to stick/slip, resistance to abrasion and long-term stability.

The driving rods are guided in long-life, low-friction sliding bearings with close tolerances; this results in highly precise measurements. Transverse forces reduce the service life and can be avoided by using, for instance, ball joint couplings.

Due to the pump effect, the driving rod has double sliding bearings. All the figures quoted in the data sheet for non-linearity, service life, reproducibility and temperature coefficient apply to the use of the sensor as a voltage divider with a maximum current of 0.1 µA.

A ball joint coupling (see accessories) at the end of the sliding shaft minimizes axial errors between the sensor and the equipment.

- Measurable displacements between 0 ... 25 mm and 0 ... 250 mm
- Non-linearity max. ± 0.05 % F.S.
- Housing diameter 12.7 mm
- Service life: 10⁸ movements
- Adjustment speed: up to 10 m/s
- Integrated cable 1 m
- Special versions:
  - Coupling with ball joints or flange fastening by request

* without mounting parts

Electrical values
- Resistance: refer to table
- Tolerance of resistance: ± 20 %
- Maximum operating voltage: refer to table
- Operating current in the slider circuit: recommended < 0.1 µA, maximum 10 mA
  (> 0.1 µA: negative influence to linearity and durability)
- Dissipation: refer to table
- Insulation resistance: > 100 MΩ at 500 V=, 2 s, 1 bar
- Electric strength: < 100 µA at 500 V~, 50 Hz, 2 s, 1 bar

Environmental conditions
- Operating temperature range: - 30 °C ... 100 °C
- Storage temperature range: - 50 °C ... 120 °C
- Influence of temperature:
  - to resistance: 200 ± 200 ppm/°C
  - to output voltage: < 1.5 ppm/°C

Mechanical values
- Non-linearity: refer to table
- Resolution: 10 µm
- Displacement force, horizontal: ≤ 0.5 N
- Displacement speed: ≤ 10 m/s
- Vibration resistance: 5 ... 2000 Hz, A max = 0.75 mm, a max = 20 g
- Shock resistance: 50 g, 11 ms
- Protection class: acc. to EN 60529 IP60
- Electrical connection: integrated, shielded cable, length 1 m, diameter 4 mm

Important:
The outstanding properties of these sensors are only available when the slider current in the voltage divider is kept < 0.1 µA. If the measuring chain draws higher currents, the use of an operational amplifier as a voltage follower (I < 0.1 µA) is recommended (see drawing).

Assembly
Two fastening clamps for mounting purposes are included with the device, see dimensional drawing. The recommended spacings are given in the table.

The CAD drawing (3D/2D) for this sensor can be imported online directly into your CAD system. Download via www.burster.com or directly at www.traceparts.com. For further information about the burster traceparts cooperation refer to data sheet 80-CAD-EN.

Order Information
Potentiometric displacement sensor Model 8709
Range 100 mm

Accessories
Mounting set Model 8709-Z001
(2 holders for mounting, refer to drawing)
1 set is part of delivery

Ball joint (refer to drawing, in the lower left) Model 8709-Z002
Connector 12 pin, for burster desktop devices Model 9941
Connector 9 pin, for DIGIFORCE® 9310 Model 9900-V209
Connector 5 pin, for extension Model 99121
Mounting of a connector to the sensor cable only for connection to SENSORMASTER 9163 desktop version

Analysis and amplifier units like digital indicator 9180, amplifier 9243 or USB sensor interface 9206 or DIGIFORCE® refer to section 9 of the catalog

Manufacturer Calibration Certificate (WKS)
Calibration of the sensor with or without evaluation electronics. Calibration with 6 calibration points in 20 % increments.
