The measurement solution.
Do you use manual presses?
Do you need 100% quality monitoring with unrivalled economy?
Do you have a high parts variation or medium production counts?
Do your trainees need to come to grips with the instrumentation quickly, easily and without risk of tampering?
Do you need visual and acoustic OK/NOK monitoring?
- Do you use manual presses?
- Do you need 100% quality monitoring with unrivalled economy?
- You have a high parts variation or medium production counts?
- Do your trainees need to come to grips with the instrumentation quickly, easily and without risk of tampering?
- Do you need visual and acoustic OK/NOK monitoring?
We’ve got the solution!

ForceMaster 9110

Unrivalled economy  Flexible  Super-easy
Load cell  Displacement sensor  Assembly parts
Load cell, Displacement sensor, Assembly parts
Step 1: Mounting the load cell
Step 1: Mounting the load cell

1. Adjusting the press head.
2. Push the catch for the displacement sensor on, and tighten it by hand.
3. Insert the load cell into the press head and fasten it.
Step 1: Mounting the load cell

1. Adjusting the press head.
2. Push the catch for the displacement sensor on, and tighten it by hand.
3. Insert the load cell into the press head and fasten it.
Step 1: Mounting the load cell

1. Adjusting the press head.
2. Push the catch for the displacement sensor on, and tighten it by hand.
3. Insert the load cell into the press head and fasten it.
Step 2: Mounting the displacement sensor
Step 2: Mounting the displacement sensor

1. Fastening the mounting plate.
2. Mounting the displacement sensor.
Step 2: Mounting the displacement sensor

1. Fastening the mounting plate.
2. Mounting the displacement sensor.
Step 3: Autoconfiguration
Step 3: Autoconfiguration

1. Insert the plugs.
2. Automatic detection of the sensors.
3. Switch the instrument on.
4. Carrying out the autoconfiguration with a sample part.
5. Start production.
Step 3: Autoconfiguration

1. Insert the plugs.
2. Automatic detection of the sensors.
3. Switch the instrument on.
4. Carrying out the autoconfiguration with a sample part.
5. Start production.
Step 3: Autoconfiguration

1. Insert the plugs.
2. Automatic detection of the sensors.
3. Switch the instrument on.
4. Carrying out the autoconfiguration with a sample part.
5. Start production.
Step 3: Autoconfiguration

1. Insert the plugs.
2. Automatic detection of the sensors.
3. Switch the instrument on.
4. Carrying out the autoconfiguration with a sample part.
5. Start production.
Step 3: Autoconfiguration

1. Insert the plugs.
2. Automatic detection of the sensors.
3. Switch the instrument on.
4. Carrying out the autoconfiguration with a sample part.
5. Start production.
Your options with FM Control

- Analysis of the curve and configuration of the evaluation elements
Your options with FM Control

- Analysis of the curve and configuration of the evaluation elements
- Easier, faster tool changeover through card management system
Your options with FM Control

- Analysis of the curve and configuration of the evaluation elements
- Easier, faster tool changeover through card management system
- Printing out reports
...Super-easy!
